1. Who created the final Version?

- Osamah Yacoub, Ahmad Arrabi on 31 December 2002 (Version 1.0)

2. What is the intended use?

- To manage and track training and testing sessions for Government of Jordan employees.

3. Who are the intended users?

- Government of Jordan employees (Information contained in Scope and Actors Sections)

4. What is the standard environment?

- Web-based, accessible via Internet Explorer 5.0 or higher.

5. Pick a functional requirement (e.g. Inputs like events or triggers) and check if that requirement is complete, accurate, unambiguous, traceable, testable.

- The "Course/Test Maintenance" is complete, accurate, unambiguous, traceable, and testable, covering all actions for course/test management.

6. Is there a requirement regarding data security? If yes, what does that look like?

- NO: Varied access levels are defined, ranging from full system control for PMU MoICT to limited viewing and evaluation access for the employees.

7. Is there a requirement on how the software should be designed? If yes, what does that look like?

- The software uses a 3-tier architecture with XML support.
